SUPERCAP TSP Synthetic top pourer closure

SUPERCAP TSSP Aluminum top pourer closure

SUPERCAP PNR No Refill pourer closure

T-Pourer and T-No Refill technologies represent the evolution and innovation in the design of closures. Both are the result of years of research and testing. T-No Refill has a glass ball inside its shank with a double function: it allows the product to be smoothly poured, while blocking any attempt to pour some other product into the original bottle, thus avoiding any type of counterfeiting.

See also the more sustainable solutions T-Kompost, the pourer with a fully compostable top, and T-Pourer ECO, part of the E|C|O® Line, read more about it in the Green Tech section of this catalogue.

RESISTANCE TO THE ATTACK OF MOULDS AND PARASITES

Unassailable by moulds and parasites: TCA 2,4,6-Trichloroanisole free

OPENING

Easy and regular, the open and close system ensures excellent sealing.

DIMENSIONAL STABILITY

Excellent, NO DUST

SYNTHETIC MATERIAL

Expanded thermoplastic resin, suitable for contact with food.

SUPERCAP NTPj Coinjected plastic head closure

Both visually and by touch, it recalls the natural cork texture. This product is made up of micro-granules of sanitized cork blended with thermoplastic materials. Its structure prevents any type of crumbling during the opening of a bottle. Compared to the traditional technical closures, Supercap Nature contains no glue. The closures prevent the migration of contaminants or harmful substances, which could alter the organoleptic properties of the product inside the bottle.

Nature

The entire Nature line is resistant to molds and bacteria and features a good elastic range with an excellent dimensional stability. Research has shown an excellent performance line of products, with no cork taint and a limited permeability to oxygen, thus preserving all aromas and flavors of the product.

CLASSIC USE

Grappa, Rum, Cognac, Brandy, Whisky, Vodka, Spirits Oil and vinegar

T-WILD

SUPERCAP T-WILD Wood head closure

The recovery of wood felled during the storm of VAIA in 2018, has given us the unique opportunity to create this unique wooden cap: the stepping stone to rebuild the fragile balance of our ecosystem, using natural resources resulting from natural disasters.
